Meg and Paul -

Here are a slue of my revisions for the aggregate compliance approach. I introduced a new set of sub-sections to keep it orderly and annunciating the logical progression (hopefully). Meg, I think it may be easiest for you to drop this whole new section iii Aggregate Compliance Approach into your version and work from there. Most of your text is retained, but re-ordered.

Anything highlighted in blue is something I will insert by tonight or tomorrow morning (mostly numbers and a table). Anything in yellow or in a comment box is for Paul/Meg consideration. I would note that i think we should do a percent below baseline, so if, for some reason, the baseline is ever changed, we can stay consistent with that percent. We need to determine how many acres below it should be (5 million, maybe, given that there are only 36 mill CRP acres buffer?) and then convert that to a percent.

Paul, would greatly appreciate you giving this a once over to see if the structure and writing makes sense as I've changed it.

-k

Still at home plugging at numbers. Call me if you have Qs 607-339-1883
